### Technical skills and competences

- **Organization and development of a modern clinical facility, at European standards (2006-2007) bringing together all restorative disciplines**

The structure is modular, based on a system of units which provides an extra comfort to the patient and efficiency to the didactic process; each cell is equipped with dental units and computer.

The educational facility is equipped at a European standard, with computerized systems for image acquisition and processing, which contributes to the realization of an efficient database and of competitive therapies, providing the necessary infrastructure for a didactic and research activity at a European level, bringing together biomaterials, biotechnologies and biomechanics studies and the practical impact of clinical dental aspects.

Of a similar importance is the computerized transmission of the image, associated with modern simulation techniques which precede practical interventions and lead to a highly academic didactic process.

On the computer in each cell one can access the ProDent software, which is an original software focused on the particularities of each clinical entity, bringing together both the necessary data for the observation sheet and the 3D simulation elements specific to each particular case, with a deep impact on the educational process and in the field of medical assistance.

### Computer skills and competences

Computer competence. The elaboration of an original observation sheet for each particular dental entity.

#### **TECHNIQUES, RESULTS AS A NATIONAL FIRST:**

- Realization, in agreement with ISO standards, of testing devices for the consistency of dental cements, solubility and compression resistance, as well as of a testing device for the hardness of metallic alloys through the technique of squalification.
- Realization of allergy studies on lots of patients in view of testing acrylic and metallic materials;
- Corrosion studies of metallic materials in saliva and artificial environments,
- Clinico – technological and biocompatibility research on dental ceramics and additional instruments (Contract 1114/27 II 1989)
- Research regarding ethiopathogeny, diagnosis and treatment of stomatognathic system dysfunctions (1991 - 1995); participation to the realization of the contract with A.S.M.
- Research regarding the behavior of hydroxylapatite granules produced by i.c.p.m. cluj - napoca, in case of their use as implants for the treatment of bone oromaxillofacial defects (in charge with the Research Contract no. 332/1992-1994)
- Contributions to the elaboration of new acrylic and silicone structures with a deep impact in dental practice, bringing together socio-economic criteria and material performance (Research Grant CNCSIS no. 831/2006)
- Optimization of implant surface by using active hydroxiapatite, creating the premises of a concept: periintegration (Research Grant no. 61/2006 CNCSIS)
- **Creation of an original clinical sheet for each clinical entity and of an original software, a real support for practitioners and students (PRODENT)**
- **Organization and development of a modern education facility at European standards(2006-2007) bringing together all the restoration disciplines**
- **Setting up, in 2014, of the International Institute of Medical Sciences and Biotechnologies, unique in Romania**, meant to stimulate and support avant-garde medical research activity.
- **Creation of three Centers of Excellence** by means of resources provided with European projects, unique in the Romanian academic environment, equipped with top instruments, which allow students to excel and improve their knowledge in the field, stimulating their professional development based on their skills.
- **„Center of Specialists Formation and Resources in Oral Rehabilitation”,**
- **„Center of Simulation, 3D Assistance and Robotics in General and oromaxillofacial Rehabilitation”** (facilities: 5 DENTSIM simulators, 1 ROBODENT system, 1 system of computerized axiography Arcus Digma, 1 dental laser system, ,1 intraoral 3D scanner, 3 ultrasound, 3 electrocardiographs, 1 anesthesia/sedation/monitoring device, 1 simulator for laparoscopic surgery and 1 sinus video-endoscope ),
- **„Center of Medical Imaging through Virtual and Augmented Reality Technologies”** (facilities: Telemedicine system, 3D scanner for the dental lab, software of VR scenarios for providing first aid and resuscitation under extreme conditions, software package for dental simulation, 3D Analyzer).
- - "Center for Robotics in Dentistry"
- - "Digital Smile Design Center"
- - "Center for Surgical Lasers in Dentistry"
- These centers of excellence, founded and coordinated by Prof. Univ. Dr. Norina Forna, will create the premises for a **NEW DISCIPLINE** in the curriculum of the Faculty of Dental Medicine, entitled **ORAL REHABILITATION IN DENTAL MEDICINE THROUGH SURGICAL LASERS, 3D ASSISTED SIMULATORS AND ROBOTS – a national and European premiere, a unique initiative to adapt the dental medical education to the latest technologies of the 3<sup>rd</sup> millennium.**
- The creation of the Discipline of **Maxillofacial Prostheses** within the Faculty of Dental Medicine and thus, the creation of a center within the research grant „Alternative plastic intervention – epthesis in the oromaxillofacial field”, one of a kind in Moldova, thus creating the first eptheses, the patients in the maxillofacial surgery benefitting from such prostheses, eliminating the mutilation effect.

- The introduction in the Romanian medical education of the concept of periintegration, a complex concept which provides substance to implanto-prosthetic solutions, based on fundamental research regarding the deposition of hydroxiapatite on the implant surface, a research trajectory to be found within National CNCISIS grants and in a European project on this theme shall be submitted inside the competition in October.
  - Starting from the correlation between theoretical training – practical applicability, with special connotations for the triad dentist – technician – medical nurse, I implemented for the first time this integrative concept in the curriculum of the Faculty of Dental medicine, Iasi and for the first time in Romania, aspects which lead to a competitive dental assisting activity, in line with the requirements promoted by the European Union. This triad concept is also found in the structure of the analytical programs, creating a harmonious integration of the notions. In the educational programs for 2008-2009 we introduced, for the first time in Iasi and Romania, a series of courses in full agreement with the European program, leading to a competitive training of the dental technician, in agreement with the current dental medicine requirements.
    - Maxillofacial prosthesis and technology of epitheses
    - Technology of epitheses through various fixation devices
    - Dento-Stomato-Facial Esthetic
    - O.M.F. Surgery and technology of surgical instruments
    - Technology of orthodontic instruments
- In addition, the optional courses introduced and delivered within the Faculty of Dental medicine constitute modalities of approach of avant-garde themes and fields from the dental practice, in full agreement with the requirements governing the world dental medicine:
- Non-invasive diagnosis methods in dental medicine.
  - Clinical implications of nanotechnologies and materials in the therapy of partial edentation
  - Attachments and telescoping in EPI
  - Diagnosis and treatment means in alternative dental medicine.
  - Non-invasive treatment methods and means (laser therapies) in EPI rehabilitation
- Introduction of the concept of **Minimally invasive diagnosis and therapy**, of the computerized thermography type or alternative treatment methods (laser) in the students' curriculum, within master's studies.
  - The introduction for the first time on the national level of the population screening with regard to the oral status in agreement with the general condition, in view of instituting a national prophylactic program for adults.
  - **The existence of 5 invention patents in the field of oral implantology, aiming at the sterilization and disinfection of the instruments used in dental medicine.**

**1. Mini-unit for disinfection with non-ionizing radiations.**

**2. Module for air ozonification**

**3. Aseptic tray**

**4. Procedure for obtaining a dental composite for filling dental prostheses.**

**5. Installation for the air disinfection in contra-current.**

**12 OSIM protected brands**

#### **DISTINCTIONS AND AWARDS:**
